

Certificate of Appreciation

is hereby granted to:

Luc Rochat

Kyle, Hannah, and Luc volunteered to take on engineering lab management duties, resulting in a thorough review and numerous process improvements. The Additive Manufacturing Lab has been reorganized for efficiency, a digital order form developed for company-wide 3D print ordering, and refined techniques to allow for composite and metals fixtures to be produced, freeing up machine, material, and technician time. In addition, the Avionics Integration Lab has been reorganized to support multiple programs, maintaining clear distinction through formal cage and materials management. A digital request form has been developed and implemented that provides a easy, manageable method for technical leads to request secure space. Tool control has been implemented to align with corporate processes. Overall, numerous improvements were made through their dedicated efforts to improve existing capability.
